Lab 1: To understand heading, paragraph and different text formatting elements of HTML

Theory:
- Explain heading tags
- Explain different text formatting elements with usage

Exercises:
Q1. Generate the following output with heading tags.

Heading 1

Heading 2

Heading 3

Heading 4

Heading 5

Heading 6

Q.2. Generate the following output with paragraph element different text formatting elements.

This is a *sample paragraph* demonstrating the use of different **text formatting elements** in HTML. The word "sample" is emphasized using italics, and the phrase "text formatting elements" is highlighted in bold. There is also an <u>underlined section</u> within this paragraph. Additionally, we can include ~~strikethrough text~~ to indicate that something has been deleted. You can use ^{superscript} and $_{subscript}$ for mathematical or chemical formulas. This text is highlighted using the mark element.
